

How to Manually Change Between Day & Night Mode

If your Private CloudPBX phone system is configured to handle incoming calls differently between business and non-business hours, it will automatically switch between day and night mode as programmed to. You can override this but using * codes. These codes can be used from any extension in your CloudPBX:

- Force into night mode: *642
- Force into day mode: *641
- Set back to automatic mode: *64

Once the system is forced into night or day mode, it will stay in that mode until you dial *64 to put it back into automatic mode.

Note: this override option needs to be enabled first. If it doesn't work for you, please contact support@naturalnetworks.com to request this.
