Migrating Redirected Folders

Migrating Redirected Folders

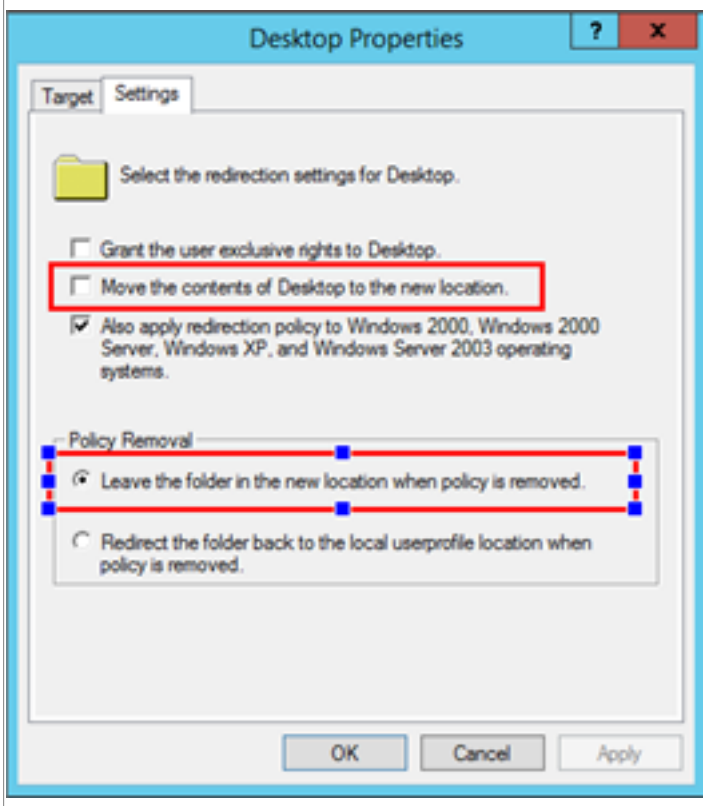

Step #	Task	Screenshot
1	Created New destination share	Created folder called “RedirectedFolders” on new ser name. 
2	Set permissions	On new share make sure “everyone” has full control s

		 Click OK twice to create share On the security tab make sure that “users
3	Set caching setting	Click on “cache Setting” and select “ No Files or Prog are available offline”

		
4	Move files	Open a command prompt as Administrator and run: ”**robocopy \\old_server_name\current redirected s** **\\new_server_name\RedirectedFolders\ /e /copyall** NOTE: This will “move” all files to new location
5	Copy back folder structure	”**robocopy \\new_server_name\RedirectedFolders** **redirected sharename\ /e /xf * >null**” NOTE: This copy back to original location just the fo files. This important because the GPO needs to see th

		the change.
6	Set Permissions on old location	Change permissions on old server share so that all use
7	Update Redirected Folder Group Policy (GPO)	Open “Group Policy Management” and right click on And for each folder (Desktop, Documents …) that is 1. Change “Root Path:” to reflect new location  2. On settings tab make sure “Move the conten

is unchecked and that “Leave the folder in new
removed” is selected.
