

AMS360 Chrome Flags

If you receive a grey dialogue box upon attempting to sign into AMS with chrome, located mid y-axis and top X-axis, that refers to comm or components, then you must change a chrome experimental DevFlag. See screenshot below:

The screenshot shows the Chrome flags page at `chrome://flags`. At the top, there is a search bar with the text "Search flags" and a magnifying glass icon. To the right of the search bar, there is a notification box for "ConnectWise Control Remote Support Software" with the URL `vertafore.screenconnect.com` and a "Reset all" button. Below the search bar, the page is titled "Experiments" with the version number "85.0.4183.121". A warning message reads: "WARNING: EXPERIMENTAL FEATURES AHEAD! By enabling these features, you could lose browser data or compromise your security or privacy. Enabled features apply to all users of this browser." Below the warning, there is a link to "beta channel". A progress bar indicates the status of flags, with "Available" on the left and "Unavailable" on the right. Two flags are listed:

- SameSite by default cookies**: Treat cookies that don't specify a SameSite attribute as if they were SameSite=Lax. Sites must specify SameSite=None in order to enable third-party usage. – Mac, Windows, Linux, Chrome OS, Android. [#same-site-by-default-cookies](#). The status is set to "Disabled".
- Temporarily unexpire M83 flags**: Temporarily unexpire flags that expired as of M83. These flags will be removed soon. – Mac, Windows, Linux, Chrome OS, Android. [#temporary-unexpire-flags-m83](#). The status is set to "Default".
