

Install.NET on Domain Joined System for Windows 10

Step #	Task	Screenshot
1	Right-click Start and click Run .	 A screenshot of the Windows Start menu context menu. The 'Run' option is highlighted with a mouse cursor. Other visible options include 'Shut down or sign out' and 'Desktop'.
2	Type regedit.exe and click OK .	 A screenshot of the Windows Run dialog box. The text 'regedit' is entered into the 'Open:' field. The 'Run' button is visible at the top left.
3	Go to the following registry key: HKEY_LOCAL_MACHINE\SOFTWARE\Policies\Microsoft\Windows\WindowsUpdate\AU	
4	In the right pane, if the value name UseWU Server exists, set its data to 0 . This disables WSUS until group policy changes this setting back to 1.
